PRYNVISION®

MULTI-SITES

MULTI-SERVERS

CENTRALIZED SUPERVISION

# PRYNVISION®

MADE IN FRANCE

INNOVATION

## A boundless supervision

Whatever the size of your installation, Prynvision® enables to manage all your video security systems from a single interface. Whether you have a single site or several sites spread around the world, Prynvision® offers a 24/7 control on: cameras, recorders, alarms, system status, hard drives, networks...

# A 360° video supervision

A unique and efficient  
software for all your  
needs and uses

Unique **intuitive**  
interface

Operating and fleet  
management functions  
for a **360° control**

**Centralized**  
management for a safe  
control

**Interactive mapping** function  
to manage, control and monitor  
cameras (and more indicators)  
around the world

**Multi-sites**, multi-servers  
and multi-displays  
management

Intervention cost reduced  
thanks to the «**fleet status**»  
function

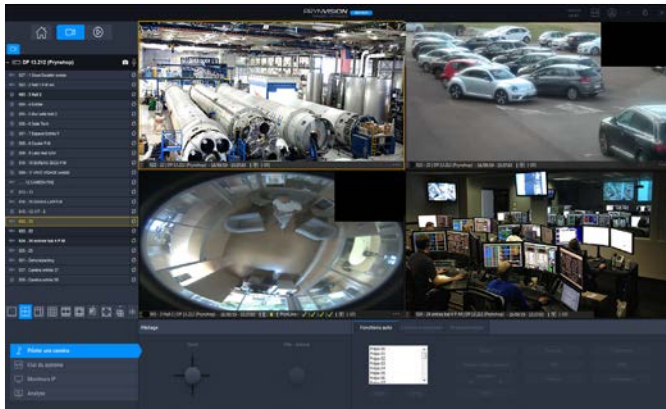

Combine **GO'IA** software  
suite with your Prynvision®  
solution for a global vision

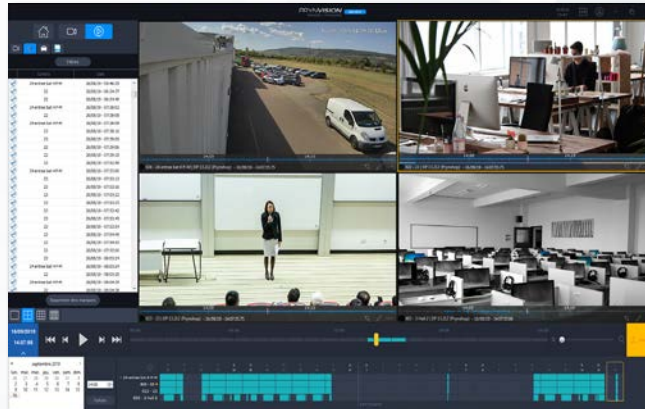

# In real time

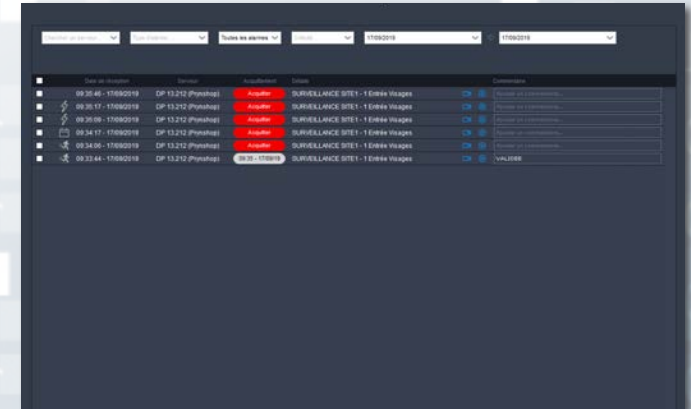

## VIEW ET CONTROL

- Multi-sites and multi-cameras video wall
- PTZ's control, 360°, panoramic and panomorph cameras
- User-friendly camera control
- Bi-directional audio transmission
- Important events marking
- Actions execution: lights, doors, etc.

## OPTIMIZED REPLAY

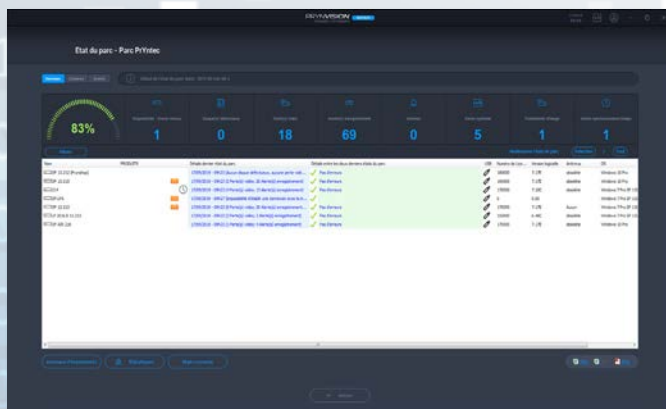

- Intuitive and remote replay automatically adapted to the bandwidth
- Image capture and editing
- Images, videos or exports repatriation
- Summary of important events marking
- Advanced search with filters and data

## MONITORING

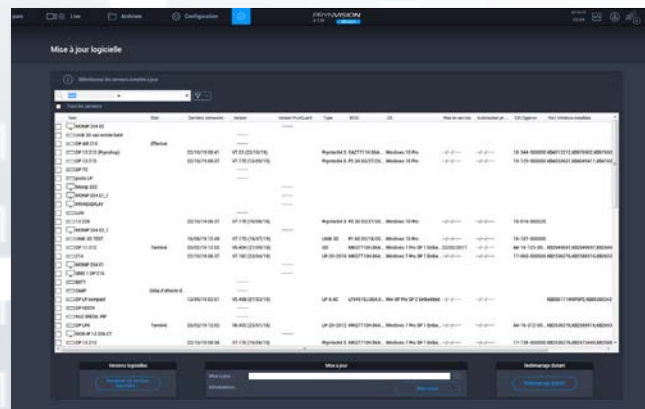

- System status: disk status, alarms, relays, events...
- Real time data: intrusion, alarms, video losses...

# In retrospect

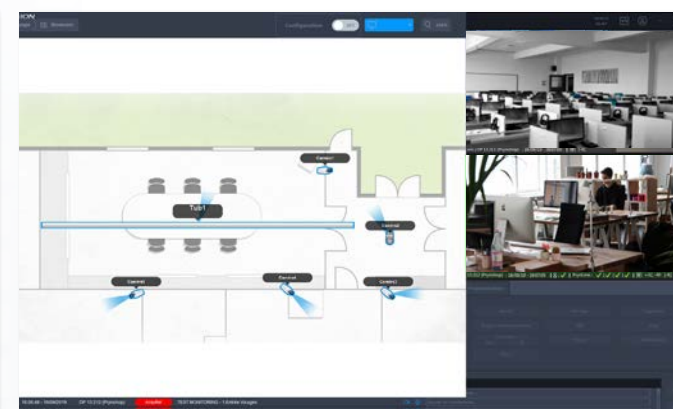

## VIEW YOUR FLEET WITH A GLOBAL AND ONGOING VISION

- Notifications
- Automatic monitoring of all the fleet's equipment: recorders, IP cameras, IP switches
- Remote access to server archives
- Remote control
- Log book
- Requisition function
- Server configurations repatriation
- Remote updates
- Park statistics
- Remote Maintenance Tool Prynguard (software watchdog)

## CENTRALIZE YOUR MANAGEMENT SYSTEMS

- Client/Server architecture
- Service mode management
- User profiles management
- IP Monitor management
- Push mode for monitoring management
- Prynvision® Server management from Prynvision® clients
- Centralization and sending of automatic reports by email (statistics, fleet status)
- Centralized Widgets Management
- Prynvision® desktop app
- Prynvision® web app

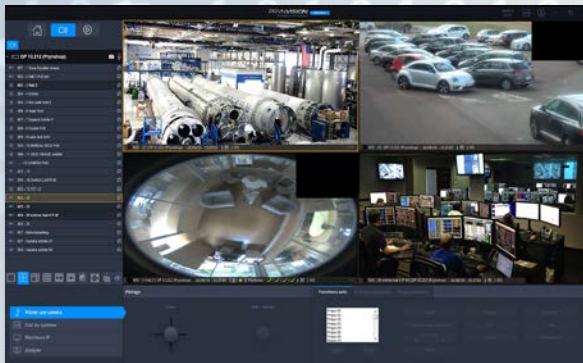

## UPGRADE YOUR SYSTEM ACCORDING TO YOUR NEEDS

- Interactive mapping
- Security POS and Dynamic display (Prynplay)
- Centralized GO'IA management
- Unlimited extensions

# A fluid Graphical User Interface

## INTUITIVE & ERGONOMIC

A screenshot of the Prynvision software interface showing a detailed data table. The table has multiple columns and rows, displaying various statistics and data points. The interface is dark-themed with various icons and labels.

Prynvision® includes exclusive features specifically designed for video operators and fleet managers.

- **UNLIMITED IP MONITORS MANAGEMENT**

Prynvision® is able to manage up to 4 working plans (video wall, operating screen, mapping, monitoring, etc.), 32 IP monitors with Neopad, and to centralize unlimited IP monitors in server mode.

- **ERGONOMIC & REPLAY**

For more efficiency, the interface has been redesigned: faster event searches, replay of 4 videos simultaneously, records available up to 90 days.

- **STATISTICS**

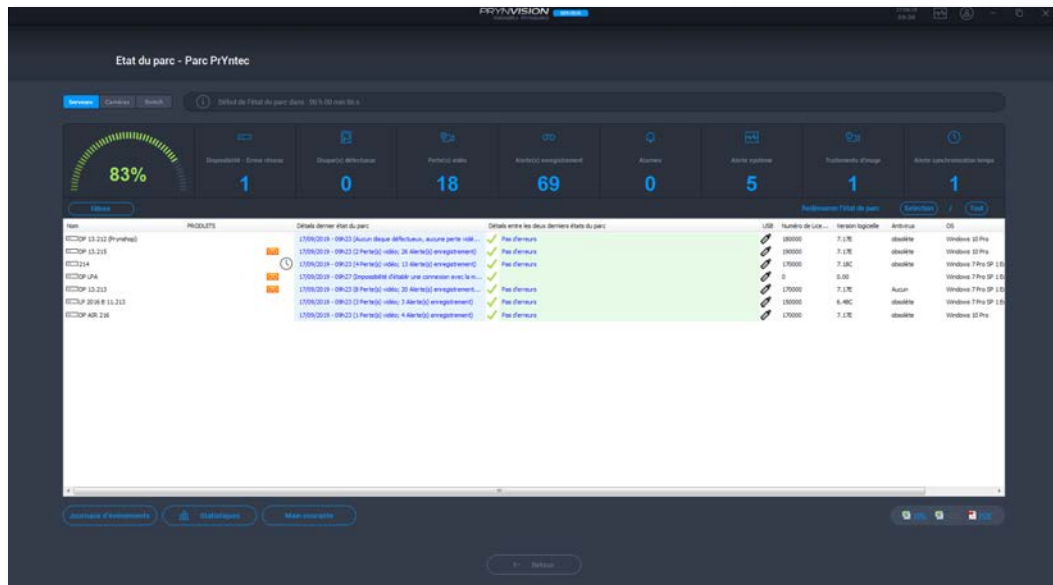

In order to support your activity and to manage your performance, Prynvision® integrates and centralizes several statistics: counting, heatzone, flow...

- **PRYNVISION® WIDGET**

Constantly keep an eye on the security cameras (up to 8) without disrupting workstations and with the ability to activate an alert button in full discretion, to communicate with the workforce, security staff or the monitoring station.

# System and Fleet Management

## 24/7 TECHNICAL STATUS AND ANALYSIS OF THE FLEET

PRYNVISION® automatically controls in real time the essential components of the video fleet:

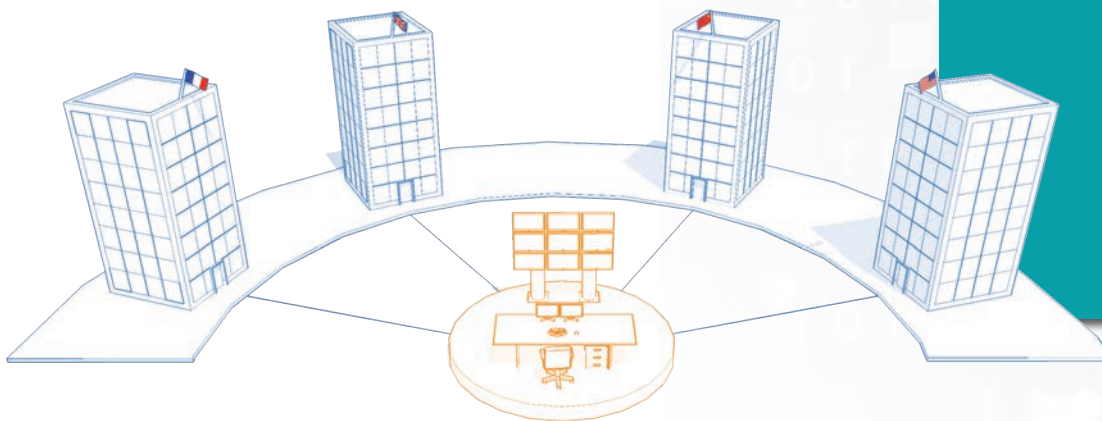

- hard disks
- network
- alarm contacts
- video losses
- camera malfunctions (battery, sabotage, etc.)
- switch management (PoE)

## MULTI-SITES REMOTE CONFIGURATION

The remote configuration allows to set up each server like you were locally connected, all configurations can be done independently or clustered.

## MULTI-SITES AND REMOTE SOFTWARE UPDATE

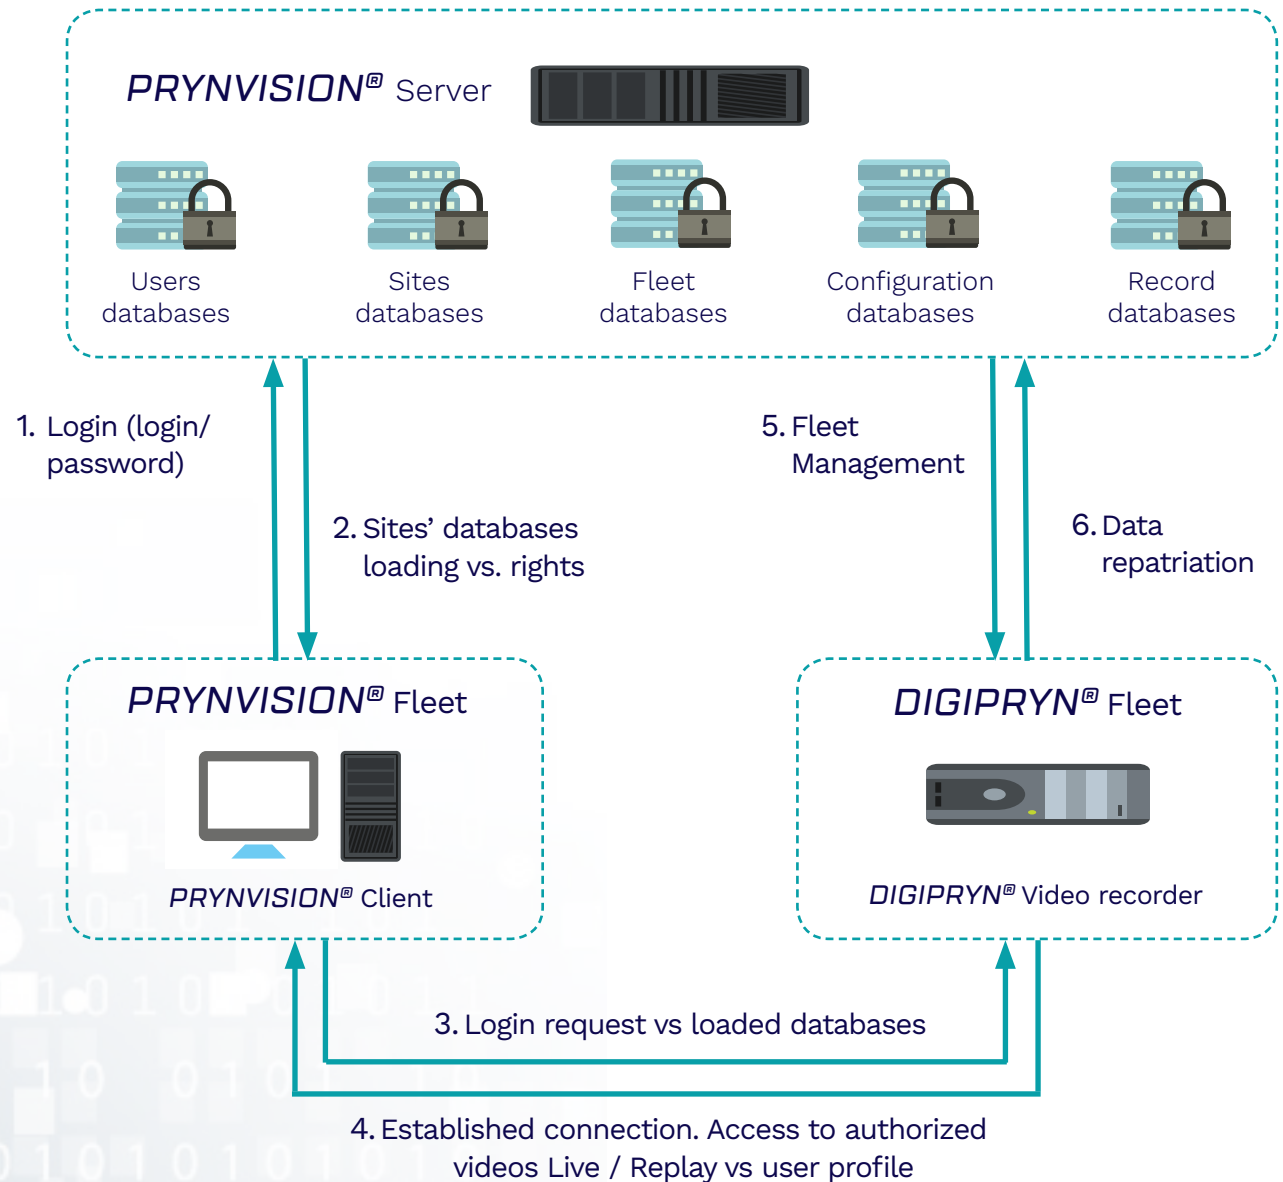

This function allows easy updates of your system and less intervention costs by avoiding human intervention.

# A Global Centralization

## SIMPLE & STANDARDIZED

- **CONTINUITY PLAN**  
Prynvision® ensures a rigorous Business Continuity Plan
- **CENTRALIZED RIGHTS MANAGEMENT**  
Prynvision® centralizes profiles and passwords management in compliance with GDPR
- **DATABASES CENTRALIZATION**  
Prynvision® centralizes all databases to ensure a perfect control of information and authorizations
- **CONTROL & AUTOMATION**  
Prynvision® ensures a global control with automatic reports to the appropriate profiles. In addition, it performs tasks automation (updates, analysis...)
- **SECURITY COVER**  
Redundancy, operation possible with the service mode

● Option

\*Basic technical features that can be upgraded on demand

# A Nomad Solution

Prynvision® is also available in mobile solution delivered on USB key (Access and Manager). Thereby you can view in full security your video surveillance system from any computer, without having to install the software.

# A discourtesy Solution

## PRYNPLAY

PrynPlay allows establishments open to the public to enhance their security while improving their communication thanks to a dynamic display. Customize your business on each site by programming broadcast contents according to calendar and schedule, choosing media content types or displaying information banners.

To accentuate the dissuasive effect, Prynplay can also be configured in Picture in Picture version.

## The added value

# GO'IA<sup>®</sup> *STATISTICS*

GO'IA is a software that offers unique video processing capabilities. Detection, identification, and individuals, vehicles or objects analysis are now available for security or analytical purposes.

Combined to Prynvision, all data, alerts and notifications generated by GO'IA are automatically centralized to provide an optimal user experience.

All kind of organization departments can use the benefit of data collected by their video surveillance to make the most of it.

# Integrate GO'IA to Enhance Performances

## SECURITY

- Reinforce access control
- Blacklist and watchlist management
- People investigation live or in retrospect
- Crowd alert
- Wrong way alert
- Restricted or dangerous area crossing

## FACILITIES

- Parking lot management
- Vehicle in restricted area
- ANPR Access control
- Intelligent vehicle detection
- Traffic detection

## QUALITY / INDUSTRY

- Industrial quality control
- Risky behaviors identification
- Unusual situations Analysis
- Access control
- Irregularity detection

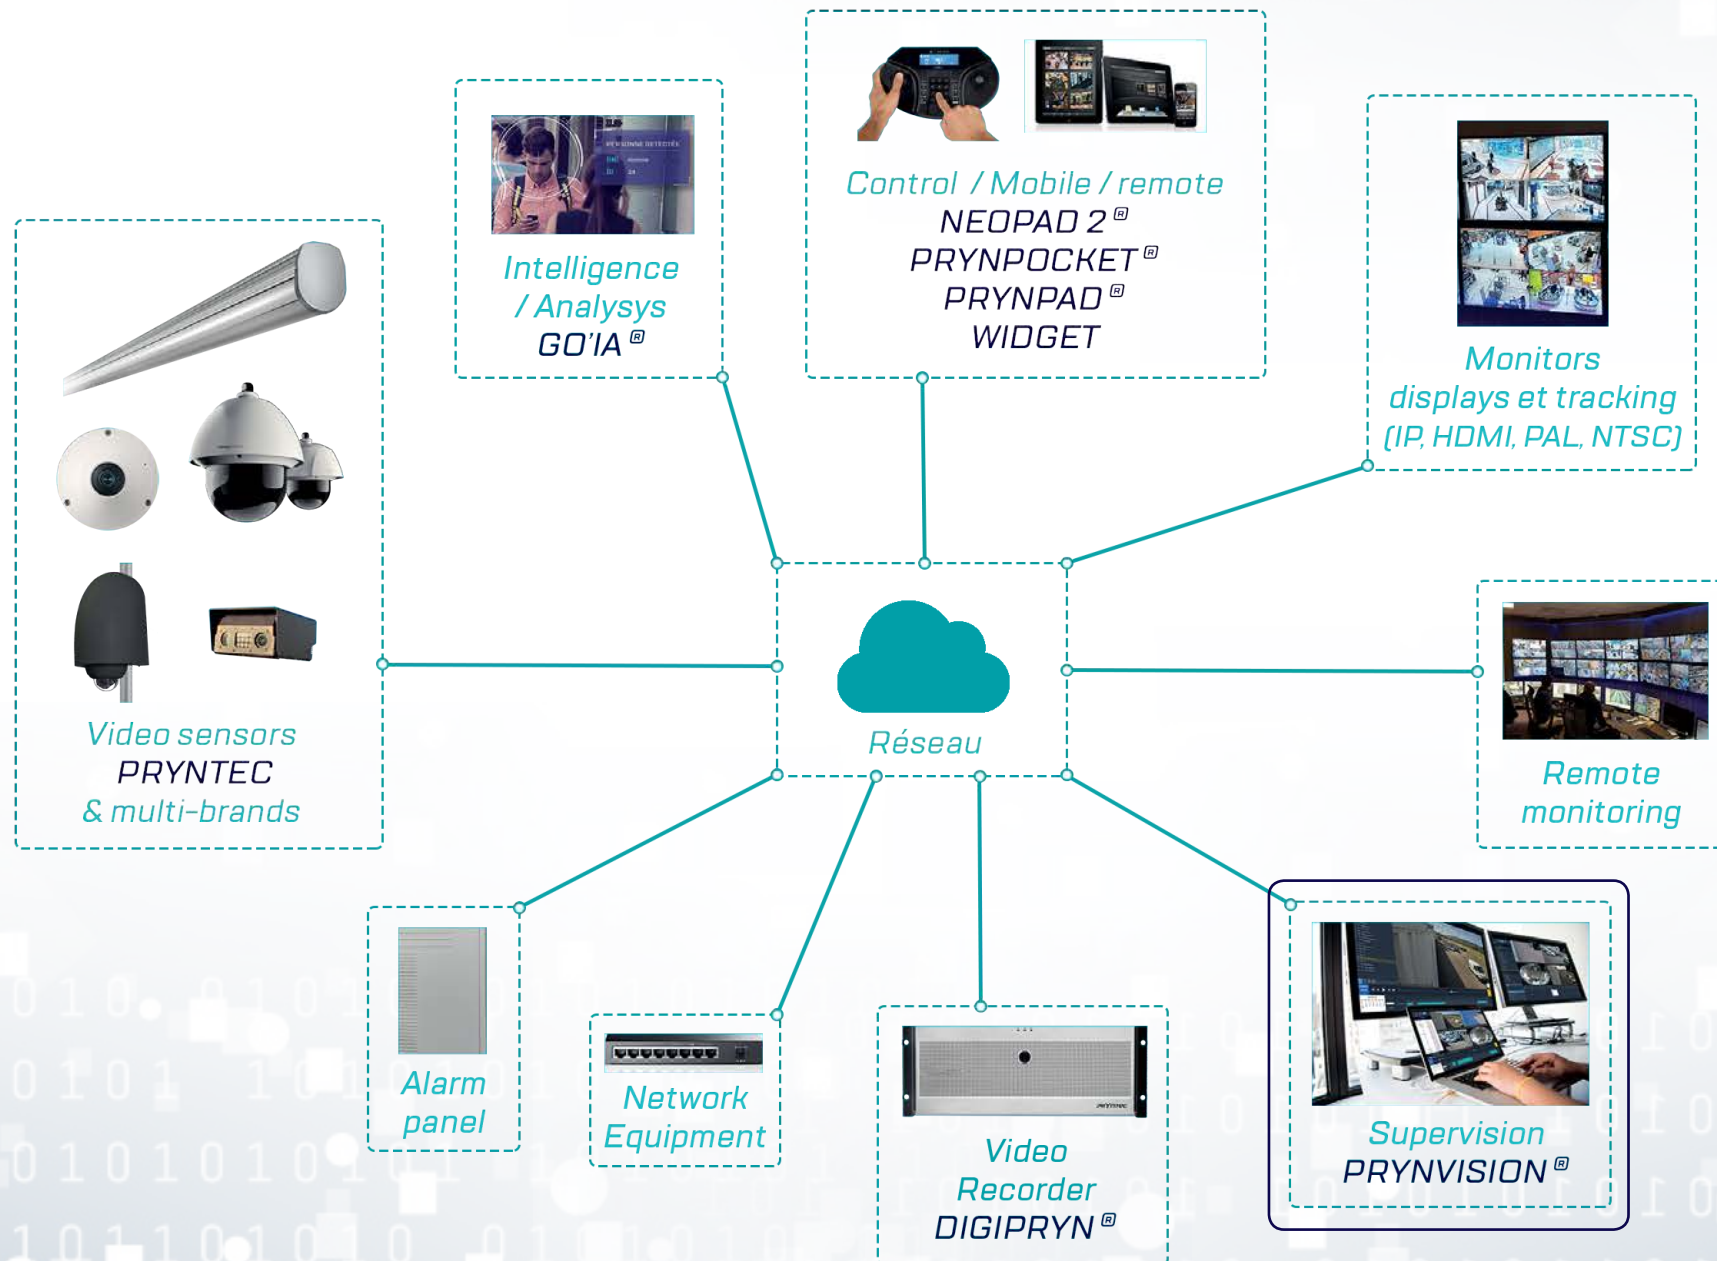

## MARKETING

- Dynamic counting
- Whitelist management
- Statistics
- Flow management
- Popular areas identification
- Line management
